

4. Suggestions for Planting Design

When planning for shrub planting, and some tree planting, consider grouping same shrub species, and same tree species together.

Give your plants room to grow to their mature size potential.

Elevation view @ time of planting

Elevation view in 20 years

Irrigate from the top, filling the basin with water and sprinkling around to settle backfill, mulch, and berm. Allow to soak in and repeat.

5. Streambank Stabilization and Erosion Control Techniques

A Brush Layering with Coir-Soil Lifts

B Pole Cuttings

C Fascine Bundles

6. Wetland Plant Community

7. Examples of Riparian Woodland Plant Communities

- Incense Cedar (*Calocedrus decurrens*)
- Dusky Willow (*Salix exigua ssp. melanopsis*)
- Scoulers Willow (*Salix scouleriana*)
- Pacific Willow (*Salix lasioandra*)
- Western Crabapple (*Pyrus fusca*)
- Common Chokeberry (*Frinus virginiana*)
- Black Cottonwood (*Populus balsamifera v. trichocarpa*)
- Oregon Ash (*Fraxinus latifolia*)
- Black Hawthorne (*Crataegus douglasii*)
- Western Dogwood (*Cornus nuttallii*)
- Red Alder (*Alnus rubra*)
- Vine Maple (*Acer circinnatum*)
- Big Leaf Maple (*Acer macrophyllum*)

1. Rogue Basin Native Plants

A healthy network of urban streams and wetlands protects water quality, provides fish and wildlife habitat and enhances the beauty and livability of our neighborhoods. You can help protect and enhance these important natural resources by learning the techniques outlined in this guide. These enhancement techniques will help you control erosion, manage invasive plants, and cultivate a healthy, native landscape.

This guide is arranged into sections to help you understand, design, plant and manage streamside vegetation. The sections are:

1. Rogue Basin Native Plants; 2. Planting and Managing Streamside Vegetation; 3. Invasive Non-Native Plants; 4. Suggestions for Planting Design; 5. Streamside Stabilization and Erosion Control Techniques; 6. Wetland Plant Community; 7. Riparian Woodland Plant Communities; 8. Resources

Stream & Wetland Enhancement Guide

Riparian Woodland Understory Trees and Shrubs

- Serviceberry (*Amelanchier alnifolia*)
- Red Osier Dogwood (*Cornus stolonifera*)
- Ocean Spray (*Holodiscus discolor*)
- Indian Plum (*Oemleria cerasiformis*)
- Pacific Ninebark (*Physocarpus capitatus*)
- Nootka Rose (*Rosa nutkana*)
- Thimbleberry (*Rubus parviflorus*)
- Golden Currant (*Ribes aureum*)
- Blue Elderberry (*Sambucus cerulea*)
- Red Huckleberry (*Vaccinium parvifolium*)
- Oregon Grape (*Mahonia aquifolium*)
- Sword Fern (*Polystichum munitum*)
- Common Snowberry (*Symphoricarpos albus*)
- Wild Mock Orange (*Philadelphus lewisii*)

Wildflowers

- Orchardgrass (*Dactylis glomerata*)
- Bluejoint Reedgrass (*Calamagrostis canadensis*)
- Idaho Fescue (*Festuca Idahoensis*)
- Meadow Barley (*Hordeum brachyantherum*)
- Columbine (*Aquilegia formosa*)
- Asters (*Aster chilensis ssp. hallii, A. subspicatus*)
- Wild Ginger (*Asarum caudatum*)
- Fireweed (*Epilobium angustifolia*)
- Com Lily (*Veratrum californicum*)
- Bear Grass (*Xerophyllum tenax*)
- Wild Strawberry (*Fragaria chiloensis*)
- Colt's Foot (*Festuca frigida*)
- Lupines (*Lupinus rivularis, L. polyphyllus*)
- Western Bleeding Heart (*Dicentra formosa*)
- Cliff Penstemon (*Penstemon rupicola*)
- Common Camas (*Camassia quamash ssp. quamash*)
- Insideout Flower (*Vancouveria hexandra*)

Grasses

- Scouring Rush (*Equisetum hyemale*)
- Soft Rush (*Juncus effusus*)
- Slough Sedge (*Carex obnupta*)
- Creeping Spike-rush (*Eleocharis palustris*)
- Manna Grass (*Glyceria occidentalis*)
- Baltic Rush (*Juncus balticus*)
- Hardstem Bulrush (*Scirpus accutus*)
- Small-fruited Bulrush (*Scirpus microcarpus*)
- American Brookline (*Veronica americana*)
- Wapato (*Sagittaria latifolia*)

Riparian Wetland Plants

2. Planting and Managing Streamside Vegetation

Watering
 After planting, irrigate trees and shrubs for 3-5 years during the summer dry period. Mulch to retain moisture. Native grasses and wildflowers need no supplemental irrigation.

Controlling Insects, Diseases and Undesirable Plants
 Generally, native plants do not require the use of insecticides or fungicides. However, if pesticides are required—use pesticides labeled for aquatic use and follow application, usage and disposal directions exactly. For more information on pesticide use contact the OSU Extension Service at (541) 773-7671.

Fertilizing
 Native trees and shrubs will benefit from a twice yearly application of a slow release or organic fertilizer for two years after planting. Native grasses and wildflowers require no fertilizer.

Other Maintenance Practices
 The pruning of native trees and shrubs is not required. Native grasses benefit from a once yearly high mowing or string line trimming. New plantings should be protected with wire netting to prevent damage from wildlife.

3. Invasive Non-Native Plants

The following plants, should not be planted in or near streams or wetlands as they have the potential to completely dominate all native plants. If possible, existing stands of invasive plants in stream corridors and wetlands should be replaced with native plants.

- Scotch Broom (*Cytisus scoparius*)
- Japanese Knotweed (*Polygonum cuspidatum*)
- Ivy (*Hedera helix and Hedera sps.*)
- Himalayan Blackberry (*Rubus discolor*)
- English Holly (*Ilex aquifolium*)
- Yellow Water Iris (*Iris pseudacorus*)
- Purple Loosestrife (*Lythnum salicaria*)
- Bird's Foot Trefoil (*Lotus corniculatus*)
- English Ivy
- Reed Canary Grass (*Phalaris arundinacea*)
- English Laurel (*Prunus laurocerasus*)
- Periwinkles (*Vinca minor, V. major*)
- Bamboo sps. (several genera)
- Blackberry

Healthy and diverse streamside vegetation helps improve and protect water quality by controlling erosion, filtering stormwater runoff and shading the stream to reduce water temperatures. For more information about how you can protect your neighborhood stream, contact RVCOG at (541) 664-6674.

Thanks to Clean Water Services for general support and brochure development.
